Entity-Relationship Diagrams

One-to-Many Many-to-Many Optional

Core System - Entity Relationship Diagram

Core System Summary

users		
Key	id	
Cor	SERIAL	
	username	VARCHAR(50)
	email	VARCHAR(255)
	password_hash	VARCHAR(255)
	first_name	VARCHAR(100)
	last_name	VARCHAR(100)
	avatar_url	VARCHAR(500)
	is_active	BOOLEAN
	created_at	TIMESTAMP

Comments: 5 To 1 relationship, nested comments (self-referencing), OR comment (CHECK constraint)

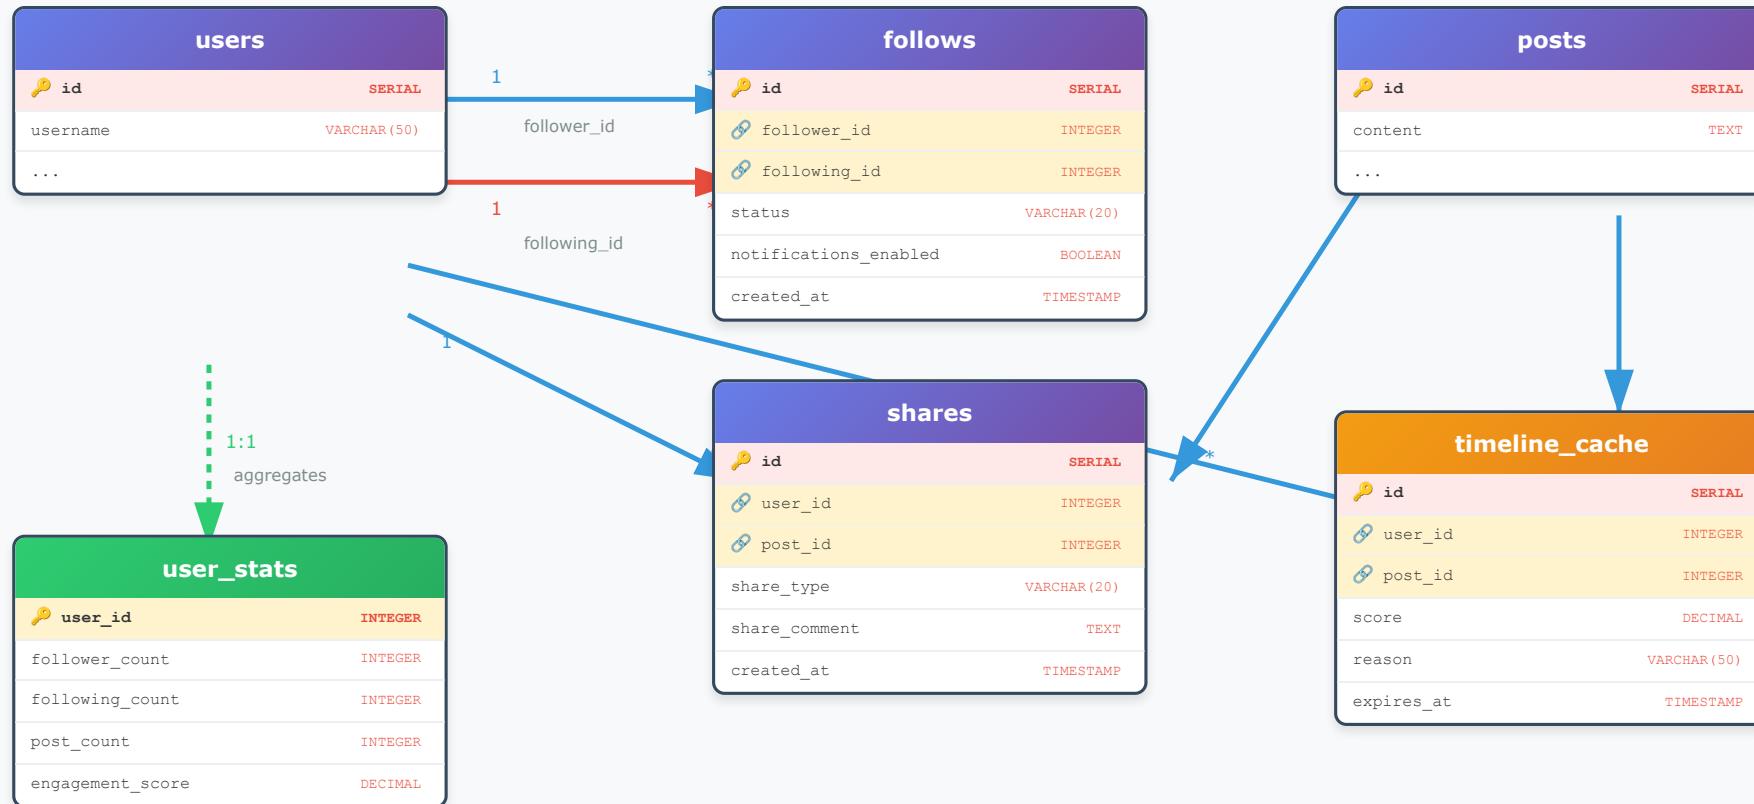

posts		
Key	id	
Cor	SERIAL	
	user_id	INTEGER
	content	TEXT
	privacy_level	VARCHAR(20)
	is_published	BOOLEAN
	views_count	INTEGER
	created_at	TIMESTAMP

media		
Key	id	
Cor	SERIAL	
	user_id	INTEGER
	post_id	INTEGER
	comment_id	INTEGER
	file_url	VARCHAR(500)
	media_type	VARCHAR(20)
	mime_type	VARCHAR(100)

comments		
Key	id	
Cor	SERIAL	
	user_id	INTEGER
	post_id	INTEGER
	parent_id	INTEGER
	content	TEXT
	depth	INTEGER
	created_at	TIMESTAMP

reactions		
Key	id	
Cor	SERIAL	
	user_id	INTEGER
	post_id	INTEGER
	comment_id	INTEGER
	emoji_name	VARCHAR(50)
	emoji_unicode	VARCHAR(20)
	created_at	TIMESTAMP

Social Features - Entity Relationship Diagram

Social Features Summary

4 Tables: follows, shares, user_stats (denormalized), timeline_cache

Key Features: Self-referencing follows (user follows user), post sharing with types (repost/quote), automated stat aggregation, timeline scoring algorithm (0-100 points)

Automation: Triggers auto-update follower/following counts and share counts

Group System - Entity Relationship Diagram

Group System Summary

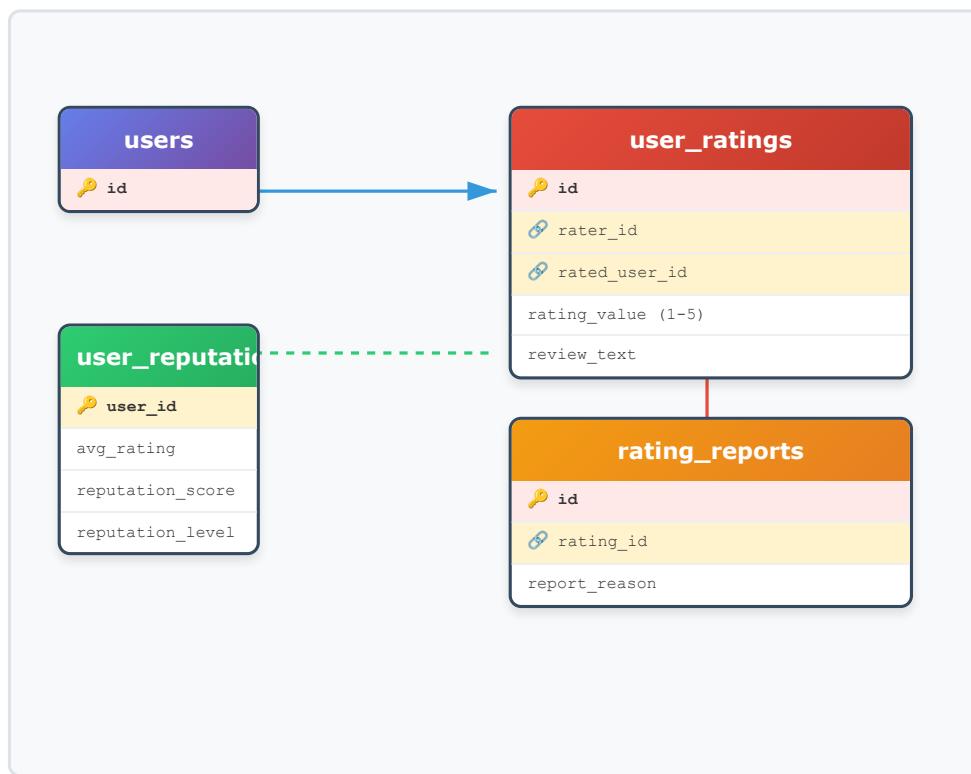

9 Tables: groups, group_memberships, group_posts, group_comments (ltree), group_votes, group_post_media, group_comment_media, group_invitations, group_activity_log

Key Features: Reddit-style communities, role-based permissions (admin/moderator/member), upvote/downvote system, nested comments with ltree paths, media galleries, moderation audit logs

Automation: Triggers auto-update vote counts, member counts, and comment counts. ltree paths set automatically on insert.

Additional Systems

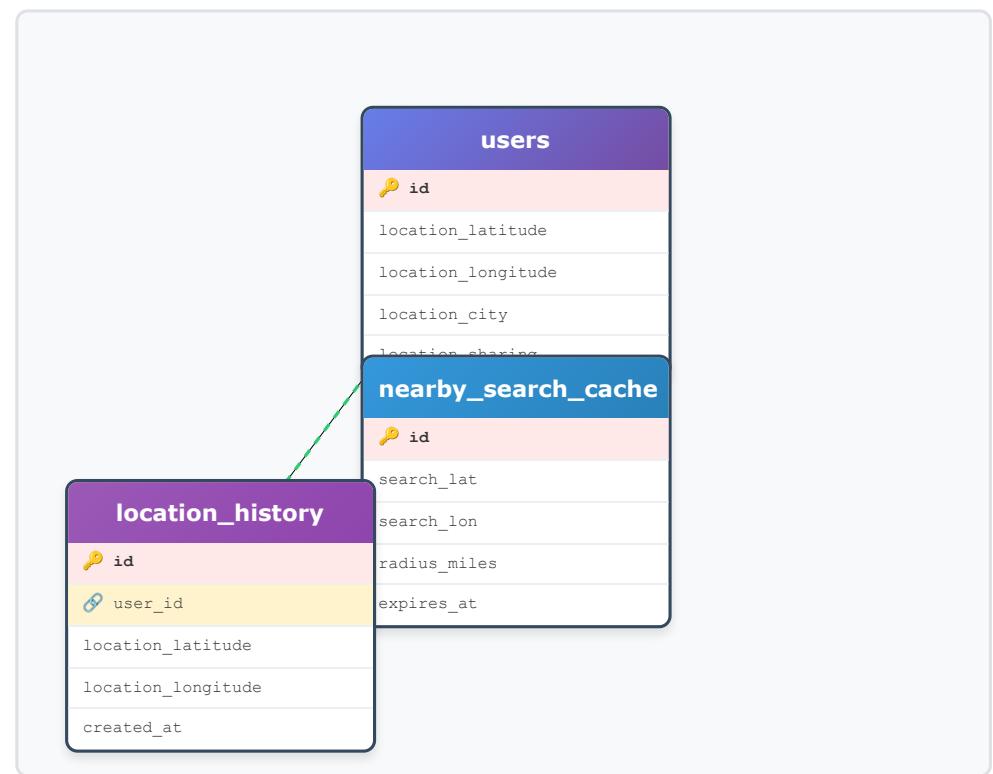

Reputation System (4 Tables)

Reputation Levels:

- newcomer (0-99)
- member (100-299)
- contributor (300-499)
- veteran (500-699)
- expert (700-849)
- legend (850-1000)

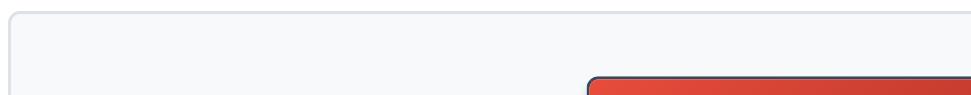

Geolocation System (2 Tables + User Columns)

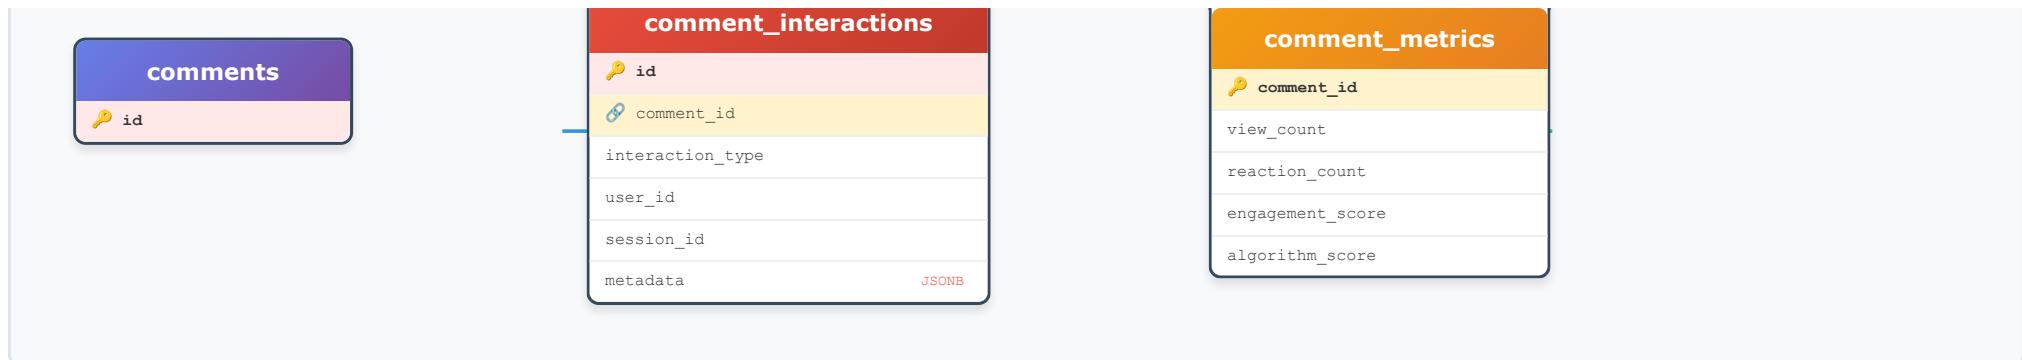

Features:

- Haversine distance formula (no PostGIS)
- Privacy controls: exact, city, off
- `find_nearby_users()` function
- 15-minute search cache
- Last 100 location history per user

Interaction Tracking (2 Tables)

Interaction Types: view, reply, reaction, share, deep_read, quote

Auto-Aggregation: Triggers update comment_metrics on each interaction

Complete Database Schema Summary

5

Core Tables

4

Social Tables

9

Group Tables

7

Other Systems

All Tables by Subsystem

Core System (5)

- **users** - User accounts & authentication
- **posts** - User-generated content
- **comments** - Nested comments (parent_id)
- **media** - File attachments
- **reactions** - Emoji reactions

Social Features (4)

- **follows** - User follow relationships
- **shares** - Post sharing/reposts
- **user_stats** - Denormalized metrics
- **timeline_cache** - Scored feeds (0-100)

Group System (9)

- **groups** - Community groups
- **group_memberships** - Member roles
- **group_posts** - Posts within groups
- **group_comments** - Itree nested comments
- **group_votes** - Upvote/downvote
- **group_post_media** - Post attachments
- **group_comment_media** - Comment attachments
- **group_invitations** - Invite system
- **group_activity_log** - Audit trail

Other Systems (7)

- **user_ratings** - 1-5 star ratings
- **user_reputation** - 0-1000 score
- **rating_reports** - Dispute system
- **helpful_marks** - Helpful content
- **comment_interactions** - Tracking events
- **comment_metrics** - Aggregated stats
- **location_history** - GPS tracking
- **nearby_search_cache** - Geo cache

Key Database Features

Automatic Denormalization

Triggers automatically maintain counts and scores: follower_count, following_count, member_count, upvotes, downvotes, score

Nested Comments

Two approaches: parent_id (traditional) and Itree paths (PostgreSQL extension) for efficient tree queries

Scoring Algorithms

Geolocation

Timeline (0-100): relationship + recency + engagement Reputation (0-1000): ratings + quality + activity - reports

Haversine distance formula (no PostGIS required). Privacy controls: exact, city, off. Efficient bounding box filtering

Database Extensions & Functions

Extension	Purpose	Usage
<code>uuid-ossp</code>	UUID generation	Generating unique tokens and identifiers
<code>ltree</code>	Hierarchical data	Efficient nested comment queries in groups

Key Stored Functions (32 total)

- `update_updated_at_column()` - Universal timestamp updater
- `calculate_distance_miles()` - Haversine formula
- `calculate_reputation_score()` - 0-1000 scoring
- `set_group_comment_path()` - ltree path management
- `update_follow_counts()` - Auto-update follower stats
- `find_nearby_users()` - Geolocation search
- `update_group_post_votes()` - Vote counting
- `is_group_admin()` - Permission helper

Triggers (18 total)

- | | | |
|--|--|--|
| • <code>update_users_updated_at</code> | • <code>update_posts_updated_at</code> | • <code>trigger_update_follow_counts</code> |
| • <code>trigger_update_share_counts</code> | • <code>trigger_update_group_member_count</code> | • <code>trigger_update_group_post_votes</code> |
| • <code>trigger_update_group_comment_votes</code> | • <code>trigger_set_group_comment_path</code> | • <code>trigger_update_user_reputation</code> |
| • <code>comment_interaction_metrics_trigger</code> | • <code>trigger_limit_location_history</code> | • + 7 more timestamp triggers |
